Do you want to help with research looking at the use of HRT in SCAD?

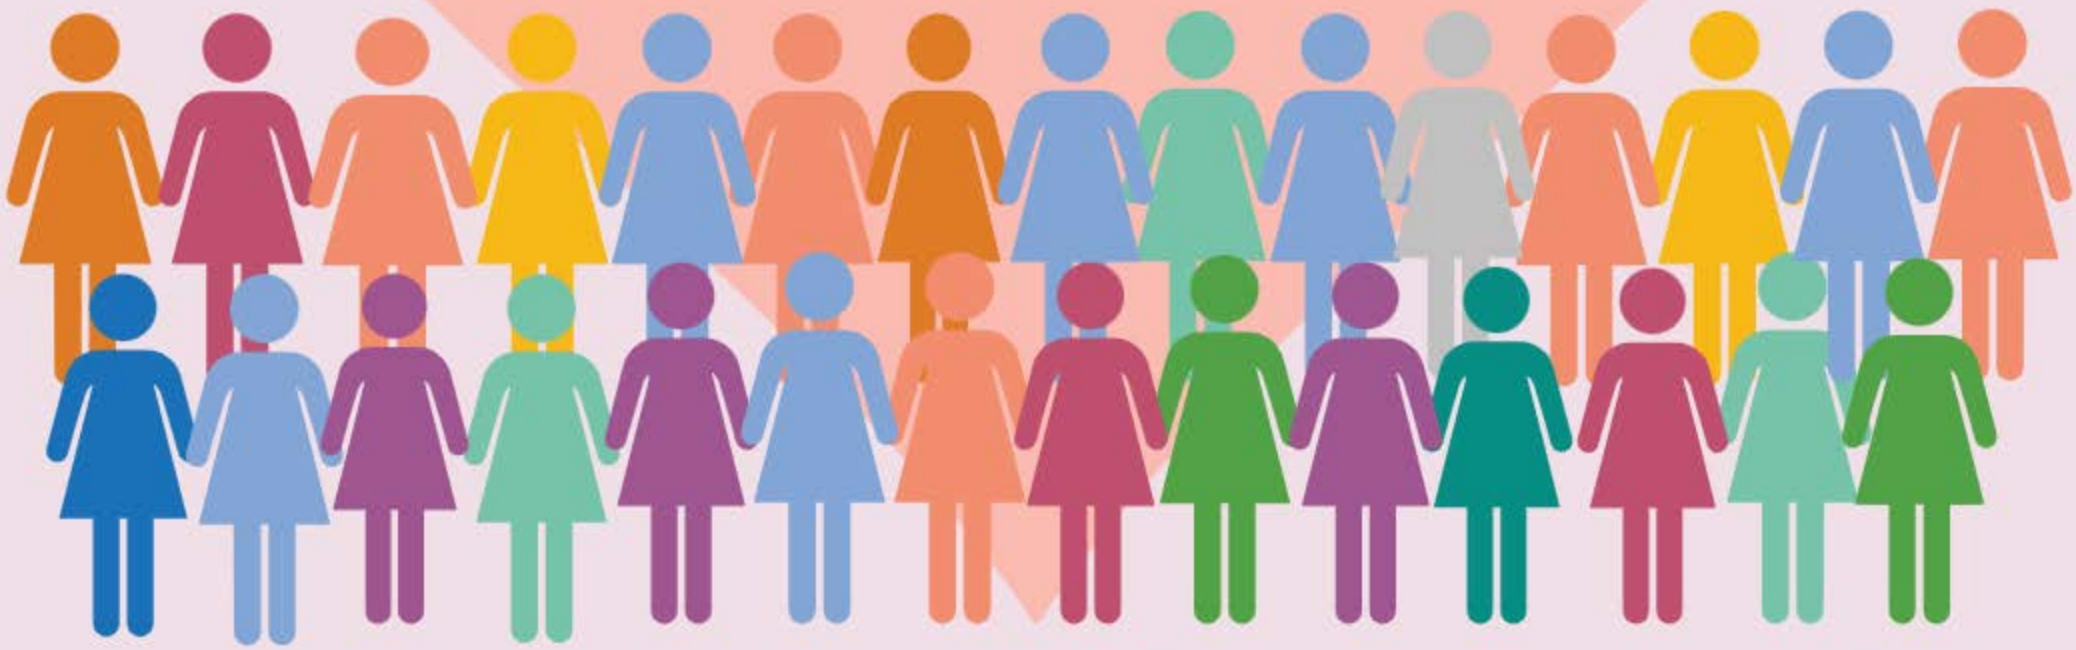
We are looking to Understand

1. The efficacy of managing post SCAD chest pain with Hormone replacement therapy.
2. Safety of HRT in peri and post-menopausal women.

We are looking for

Sixty peri and post-menopausal patients aged ≥45 years with SCAD diagnosed in the past 3 years who suffer with chest pain for at least 4 days in the previous month.

Participants will be allocated to the HRT or a placebo group randomly after which the frequency and severity of chest pain will be monitored to assess the safety and efficacy of HRT in managing post-SCAD chest pain.



If you are interested, please contact the SCAD team on uhl-tr.scadmailbox@nhs.net. We will send you an information sheet, so you can decide if you are willing to help.
